September 12, 2016

We received an order of Thyroid USP powder, the **Active Pharmaceutical Ingredient (API)** in Nature-Throid®, Westhroid® and WP Thyroid®, that was slightly darker in color and was stronger in smell than usual. These differences were caused due to a lower level of lactose monohydrate present in this **batch of API**. Lactose monohydrate, a refined milk sugar, is used as a diluent to meet specifications required by the United States Pharmacopeia (USP).

We want to assure you that this does not affect the quality or potency of Nature-Throid, Westhroid or WP Thyroid in any way. All external testing completed on this **batch of API**, exceeded all requirements set by the USP.

If you have any other questions, please do not hesitate to contact me.

Sincerely,

Robert Pickard
QA/QC Manager
